

; ; ; Deliverable D17 (V2.1) in KIF
; ; ; 28 May 03

```
;THIS IS A TRANSLATION IN KIF (ACCORDING TO THE KIF-DRAFT
;PROPOSED TO THE AMERICAN NATIONAL STANDARD NCITS.T2/98-004
;http://logic.stanford.edu/kif/dpans.html) OF THE DELIVERABLE D17 V2.1 of which
;it should be considered an appendix.
;For aknowldegments, please check the main document: Deliverable D17
;For comments on this version, please contact: stborgo@indiana.edu
```

REVIEW INFO

| CHANGES (changes in comments or due to changes in the Deliverable D17 are not reported) | COMMENTS |
|---|------------------------------------|
| (D13): changed WORD into WORLD | Typo |
| (NA3)-(NA9) have been dropped | These occur already somewhere else |
| (NA10)-(NA12) are left as comments | These are guaranteed by def. (ND5) |
| (NA13) has been dropped | It follows from (NA14) and (D2) |

```

; Formal Characterization
;PRINCIPLES USED IN THE TRANSLATION IN KIF:
;Modal operators of possibility and necessity are translated in the standard
; way, see ad es. p516 of Handbook of Logic in AI and Logic Prog. Vol.4;
; ex.  $\Box\Diamond(x)$  becomes  $\Box v(Rwv \Diamond(v,x))$  where v ranges over the worlds
;The indeces of relations are included prefixing a dot (we preserve the capital or
; lower case distinction)
;These are the only predicates (with their arity) that do not have possible worlds
; as arguments:
; X_1,PARTICULAR_1,UNIVERSAL_1,=_2

;No need for Barcan formulas, the domain of particulars turns out to be unique
; in the translation

;WLDR is an equivalence relation (from correspondence theory, this implies
; that WLDR is a relation for S5). The axioms (NA10)-(NA12) are not necessary
; because of our definition of WLDR.
; (NA10)
